Analysis of seedling size pipeline
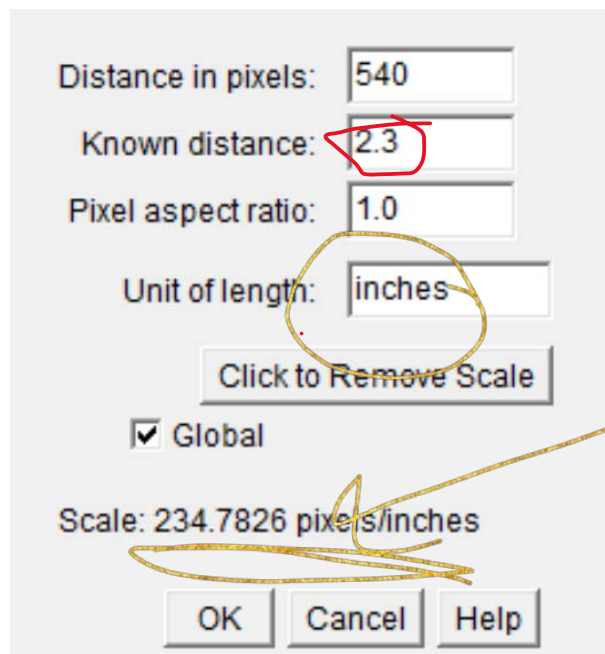

1. Open Fiji(ImageJ)

2. Open Image into Fiji

3. Use *Straight* tool to measure sides of pots
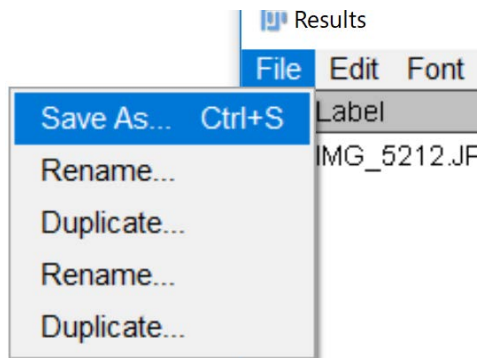

4. Scale line and record number

5. Use polygon tool to measure convex of individual seedlings

6. Press Ctrl+M(Maybe ⌘+M on Mac… Idk) to measure.
7. Save File as .csv

Remember to measure in a consitant pattern so you can go back and assign them to individual plants. **If you decide you want to remeasure delete the measurement to not mess up your order.**
